

MONTGOMERY OPERATOR CABS

- Sound deadening insulation
- Tapered windows
- Over 168 cubic feet inside
- Prewired
- Overhead variable light

- Safety pane glass
- Diamond plate flooring
- Outside hydraulic plumbing
- Climate Controlled
- Tilt-swivel seat

- Valve stands
- Consolet stand
- Color option
- Lock entry door

TAPERED WINDOWS

Tapered windows are essential to reducing glare from natural or man-made light sources. Also minimizes dirt accumulation.

CONSOLE PEDestal

Set to a comfortable height our pedestals incorporate wide pedals for controlling the "deck and loader" or other various components. The prepunched holes allow Montgomery control panels to bolt fast.

VALVE STANDS

Montgomery valve stands are designed for allowing a small force and short movements to operate, thus reducing sawyer fatigue.

OUTSIDE HYDRAULIC PLUMBING

All of Montgomery's hydraulic plumbing is outside of the cab. This keeps excess heat, dirt, noise and oil away from the sawyer's environment. Also allows easy access for minor adjustments and installation.

INSULATION/SOUND DEADENING

A high quality high tech rubberized foam absorbs the irritating harmonic vibration and other noises. Convection of cold and heat from the outside are also stopped, ensuring a comfortable work environment for increased productivity.

SAFETY PANE

Safety pane glass is used instead of plastics which scratch easily and lose their clarity. Using a safety pane glass keeps the operator and area as safe as if in an automobile.

NOTE: Safety should always be taken! Fast moving projectiles can still enter through laminated safety glass. Bullet proof type protection is available upon request.

TILT SWIVEL SEAT

This seat adjusts to height, degree of angle, swivels and slides to allow operator comfort and greater productivity.

DIAMOND PLATE FLOOR

The diamond plate floor allows for quick installation and traction stability for some applications. A floorless model is available.

CLIMATE CONTROLLED

A climate controlled environment is operator adjustable for heating and cooling. This keeps the operator comfortable and able to produce at greater efficiency.
